

## CATH•SECURE®

The Original Medical Tube Holder

②

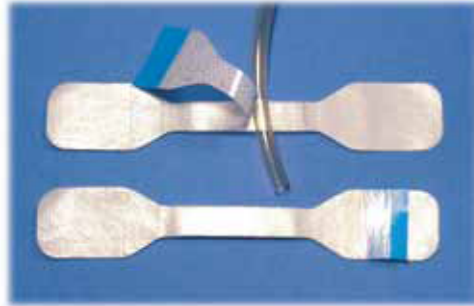

The CATH•SECURE® is the original multi-purpose tube holder.†The product line improves patient comfort and mobility, is lightweight and flexible, and most of all is JCAHO, OSHA and CDC compliant. The devices are DEHP-Free and Latex Free. The product line also improves overall clinical outcomes, lowers healthcare costs and increases nursing productivity; all while providing a better quality of care for patients, and meeting the healthcare industry standard of care. It provides an efficient, standardized system for securing catheters and medical tubing. The device is easy to adjust, remains in place for approximately one week without altering skin integrity, and is made with alcohol-soluble adhesive.†The CATH•SECURE® product tabs are designed to extend from the center, wrap around the tubing, and anchor it tightly to the tape using a press-on hook-and-loop fastening system.

**NOT MADE WITH NATURAL RUBBER LATEX  
DEHP-FREE • HYPOALLERGENIC**

## NG•SECURE®

Ideal for Nasogastric Feeding and Aspiration

The NG•SECURE® is made using a hypoallergenic tape and features a moisture-resistant foam cushion that creates a barrier between the skin and the tubing. By creating this barrier, the foam cushion on NG•SECURE® keeps pressure off of the patient's nostrils, nose, and lips which may help to prevent pressure sores and discomfort. When taping to an often oily nose area, conventional tube holders fall off within hours. NG•SECURE® has a resealable fastening system for securing the tube onto the top of the foam cushion positioned under the nose. This innovative design permits the tubing to be readjusted or repositioned as necessary

## SHIELD•SECURE™

The Ultimate Facial Barrier Protection

The SHIELD•SECURE™ product line features the Full Face Shield. The Full Face Shield is the premier shield of facial barrier protection products. It offers excellent disposable protection where there is a risk of exposure to splashing blood, body fluids, chemicals and/or other potentially infectious or harmful materials. The shield is anti-fog coated on both sides and is virtually impermeable to the liquid phase of most chemical reagents and also resists diluted mineral acids and alkalis. The Full Face Shield also conforms to provisions of Council Directive 89/686/EEC as Personal Protective Equipment (PPE).
